

VND HANGAR DOORS

- The doors is built in massive UNP 240 profile which is hot galvanized
- The doors do not have any drive limits, and can drive in all physical possible directions

- Engine and gear is not selfblocked, so that the doors let them shove up with handpower in case of a possible power failure / emergency.

Top rails

- The doors are connected to power rails via current-collectors.
- The door can be delivered with a notch ready for installation of a continuous window area.

- The doors can be driven individual or from a central control panel.
- The control system is PLS based and with frequency converter running.
